REMARKS

Reconsideration of the present application is respectfully requested. Claims 1, 20, 31 and 50 have been amended.

Claims 1, 6, 15, 18, 19, 31, 36, 50 and 55 stand rejected under 35 U.S.C. § 102(b) based on U.S. Patent No. 6,687,242 of Enzmann et al. ("Enzmann"). Claims 2, 7, 20, 32, 37, 41, 45, 51 and 56 stand rejected under 35 U.S.C. § 103(a) based on Enzmann in view of U.S. Patent No. 6,094,587 of Armanto et al. ("Armanto"). Claims 69-70 stand allowed. The remaining claims stand rejected based on combinations of Enzmann and various other references.

It is noted that page 2 of the Office Action indicates that claims 69 and 70 stand allowed, however, that is not reflected in the "Office Action Summary" (page 1).

Claim 1 (as currently amended) recites:

1.   (Currently amended) A mobile communication device comprising:
    a telephony unit in the mobile communication device to process telephony signals and to receive a signal indicating an incoming call over a wireless link, the signal including Caller-ID information; and
    a browser in the mobile communication device to enable a user to access and navigate hypermedia information, and further to receive the Caller-ID information from the telephony unit in response to the incoming call and, in response to receiving the Caller-ID information, to execute a predetermined action based on the Caller-ID information **without the user making any request for the predetermined action.** (Emphasis added.)

Enzmann does not disclose or suggest a technique in which <u>a browser</u> in a mobile communication device receives Caller-ID information and executes a predetermined action based on the Caller-ID information <u>without the user making any</u>

16

request for the predetermined action. Enzmann discloses that a mobile handset

receives Caller-ID information, where the mobile handset is equipped with a browser.

The telephone network provides an indication to the handset, which can be displayed to

the user, that additional information associated with the calling party is available upon

request (col. 1, lines 36-43). The browser provides the user with the ability to obtain the

additional information. However, the browser in Enzmann cannot act in response to the

Caller-ID information unless the user initiates a request for additional information:

> "The subscriber can initiate the request either while the telephone is
> ringing (before answering the call), during the call, while the number is
> displayed (if the handset can simultaneously support a voice call and an
> IP session), or recalling numbers of calling parties stored in the handset's
> memory after a call has been missed" (col. 1 line 67, col. 2 lines 1-
> 6)(emphasis added).

Hence, Enzmann clearly does not disclose or suggest a process or method as

recited claim 1. Thus, claim 1 is not anticipated by Enzmann, nor is it obvious based on

Enzmann.

Independent claims 20, 31 and 50 also essentially recite the above-emphasized

claim limitation, and other limitations. Therefore, claims 20, 31 and 50 are also

patentable over the cited art for similar reasons.

17

Dependent Claims

In view of the above remarks, a specific discussion of the dependent claims is considered to be unnecessary. Therefore, Applicant's silence regarding any dependent claim is not to be interpreted as an agreement with, or acquiescence to, the rejection of such claim or as waiving any argument regarding the claim.
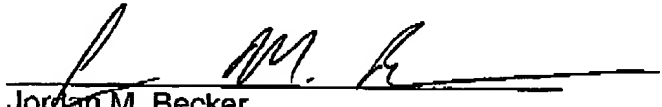

Conclusion

For the forgoing reasons, the present application is believed to be in condition for allowance, and such action is earnestly requested.

If any additional fee is required, please charge deposit account No. 02-2666.

Respectfully submitted,

BLAKELY, SOKOLOFF, TAYLOR & ZAFMAN
